ByteDance

BYTECAMP

ByteDance Programming Camp is a new bi-annual training camp open to the world's top university students (Undergraduate/Postgraduate/Doctoral). Our camps provide an opportunity for students across the world to take part in a week-long training session in AI technologies at the ByteDance head office in Beijing.

You will receive training from both industry leaders and academic experts to apply your knowledge in real challenges and learn from our vast data infrastructure to unleash your full potential. Students from all levels of higher education are encouraged to apply, but are required to register in teams. We also offer internships to the most excellent participants in our camps.

The first ByteCamp was launched in 2018 and received around 2000 applications from undergraduate-, postgraduate-, and doctoral students from around the world. Ultimately, 70 students had the chance to work with real industry challenges along with ByteDance experts and receive technical courses with Amazon AWS Machine Learning Director Alexander J. Smola and Facebook AI Director Yangqing Jia.
